Waterford Institute *of* Technology
INSTITIÚID TEICNEOLAÍOCHTA PHORT LÁIRGE

Department of Computing and Mathematics
http://www.wit.ie/

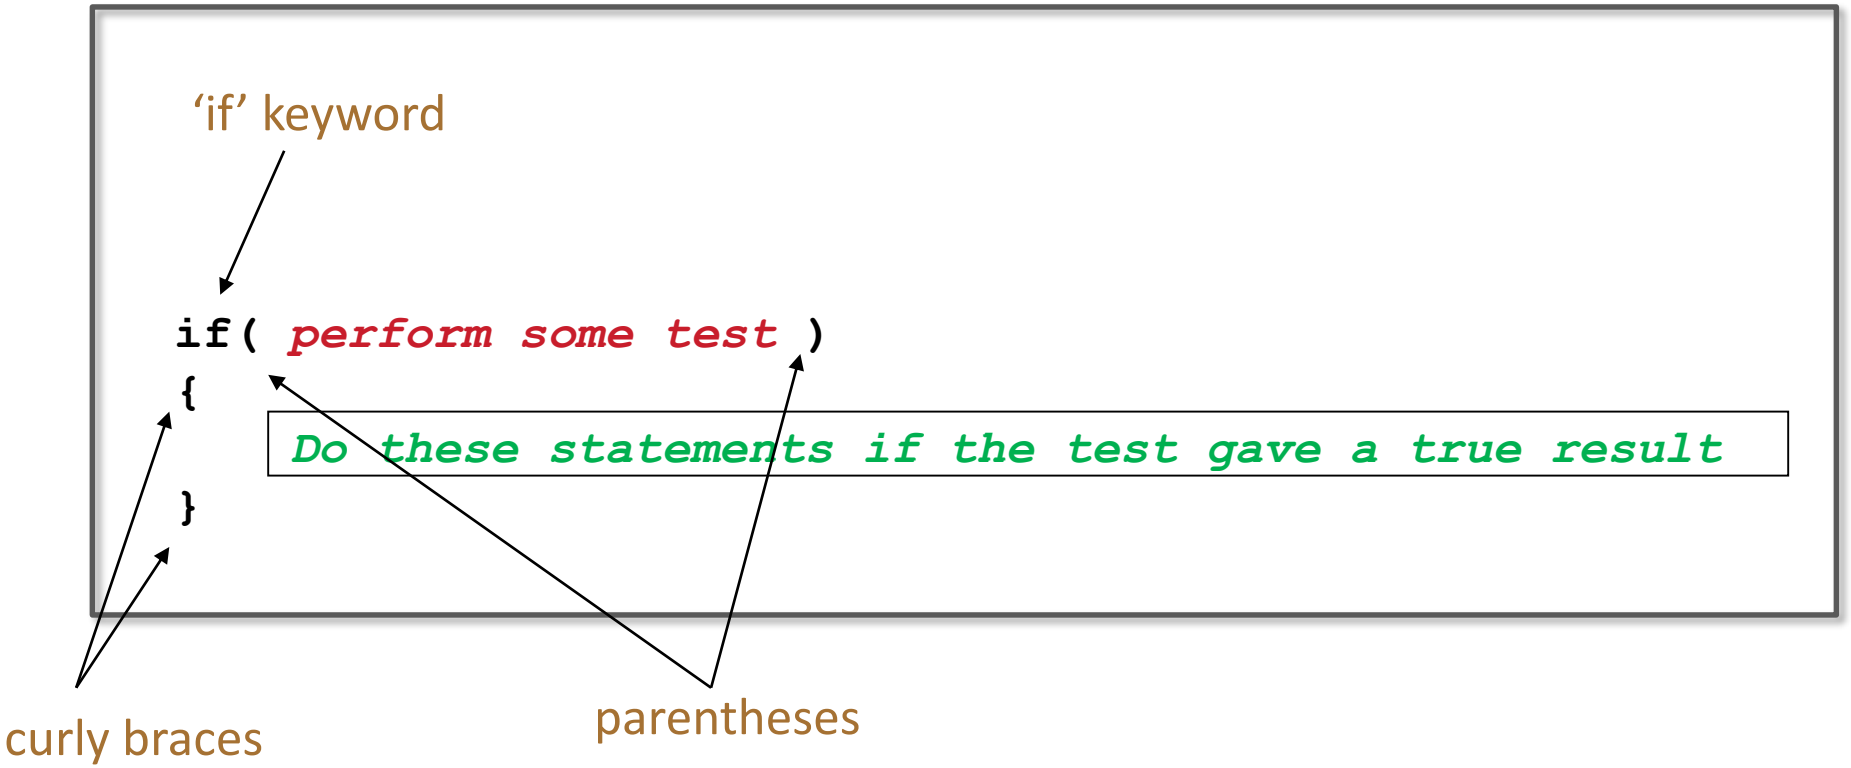
Topics list

1. Conditional Statements
2. Boolean Conditions and Relational Operators
3. Logical Operators

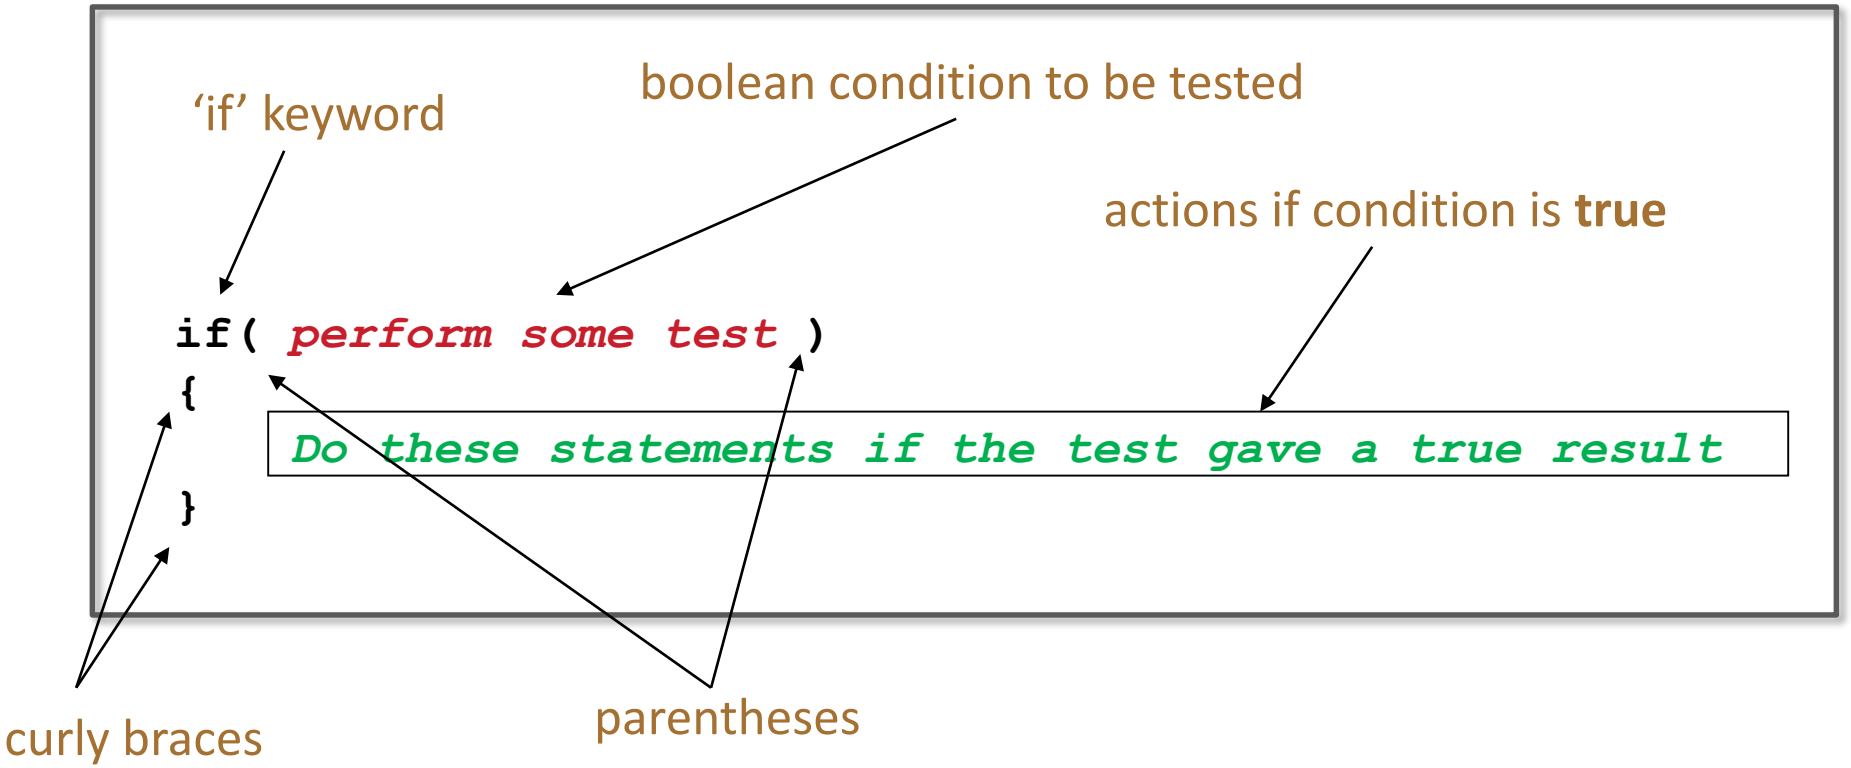
Conditional Statement Syntax (1)

```
if( perform some test )
{
    Do these statements if the test gave a true result
}
```

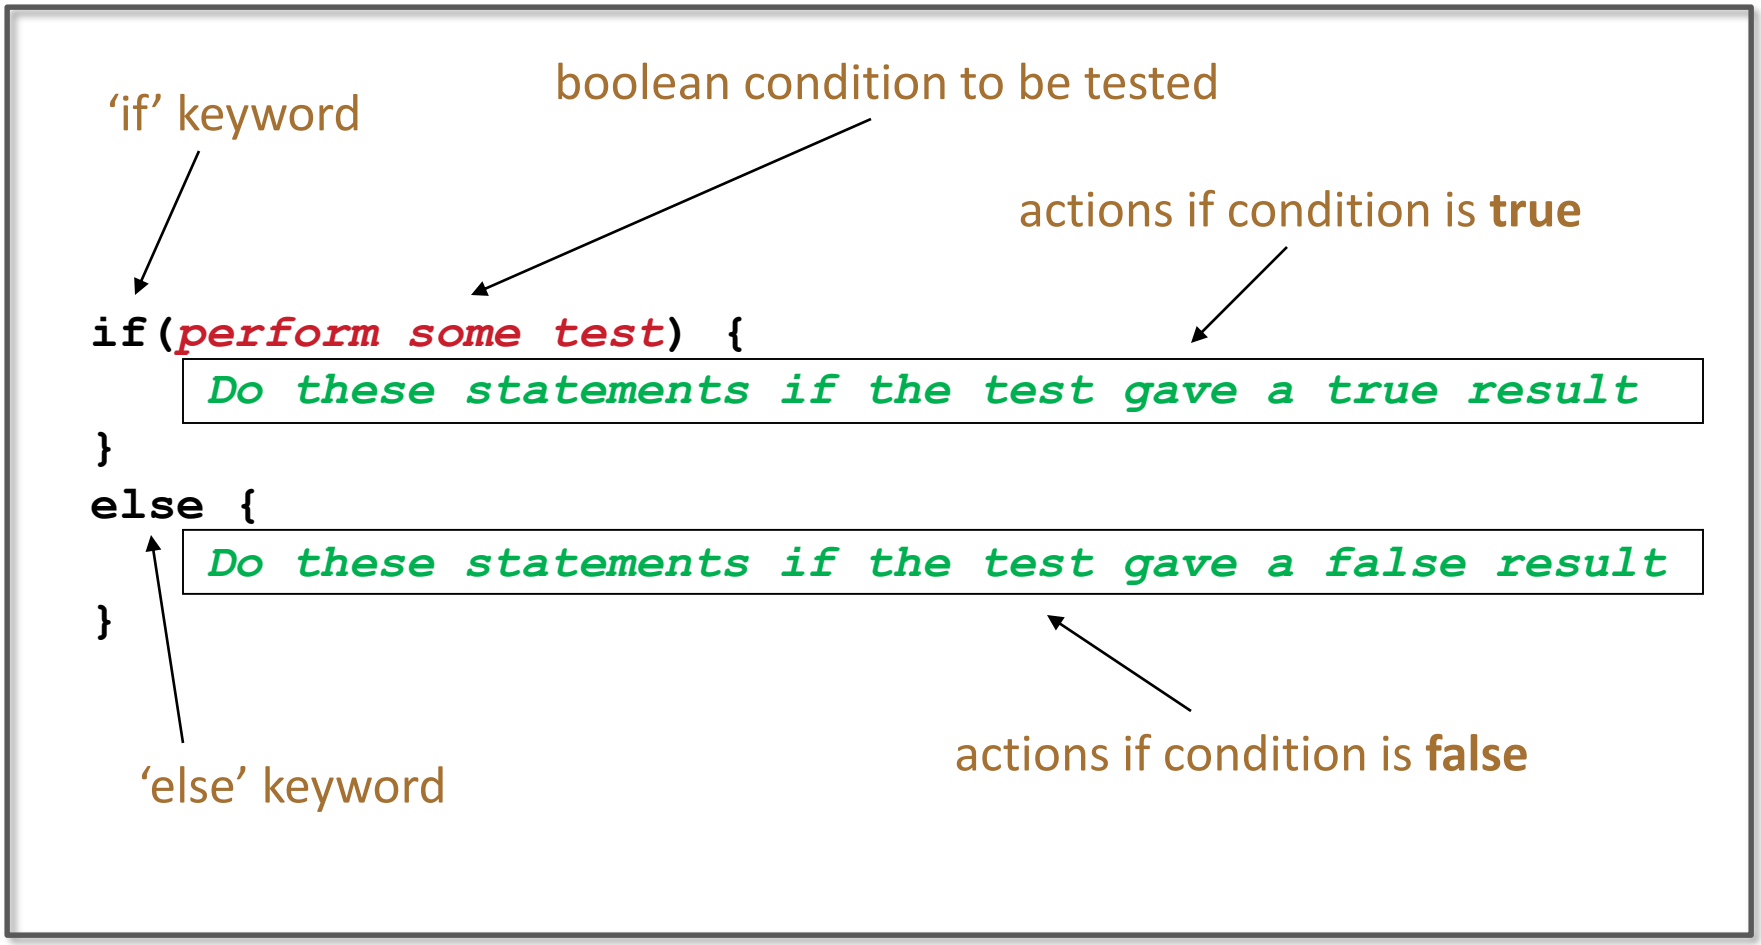
Conditional Statement Syntax (1)



Conditional Statement Syntax (1)



Conditional Statement Syntax (2)



Conditional Statement Syntax (3)

```
if(condition1…perform some test)
{
    Do these statements if condition1 gave a true result
}
else if(condition2…perform some test)
{
    Do these statements if condition1 gave a false
    result and condition2 gave a true result
}
else
{
    Do these statements if both condition1 and
    condition2 gave a false result
}
```

Topics list

1. Conditional Statements
2. Boolean Conditions and Relational Operators
3. Logical Operators

Boolean conditions

- A boolean condition is an expression that evaluates to either **true** or **false** e.g.

  mouseX < 50

- An if statement evaluates a **boolean condition** and its result will determine which portion of the if statement is executed.

Boolean conditions

```
// Do these statements before.

if (boolean condition)
{
    // Perform this clause if the
        // condition is true.
}

// Do these statements after.
```

Java Relational Operators

Operator	Use	Returns true if…
>	op1 > op2	op1 is **greater** than op2
>=	op1 >= op2	op1 is **greater than or equal** to op2
<	op1 < op2	op1 is **less** than to op2
<=	op1 <= op2	op1 is **less than or equal** to op2
==	op1 == op2	op1 and op2 are **equal**
!=	op1 != op2	op1 and op2 are **not equal**

BEWARE = is an assignment operator.
It doesn't test for equality. Use == to test for equality in primitive types

Some notes on the if statement

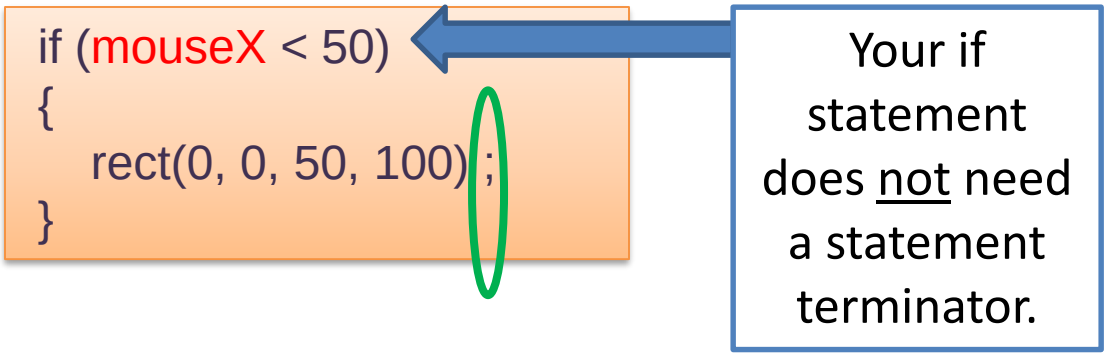
- An if statement IS a **statement**;
  it is only executed once.
- When your if statement only has one statement inside it, you do not need to use the curly braces.
- For example, both of these are the same:

```
if (mouseX < 50)
{
    rect(0, 0, 50, 100);
}
```

```
if (mouseX < 50)
    rect(0, 0, 50, 100);
```

Some notes on the if statement

- The semi-colon (**;**) is a **statement terminator**.

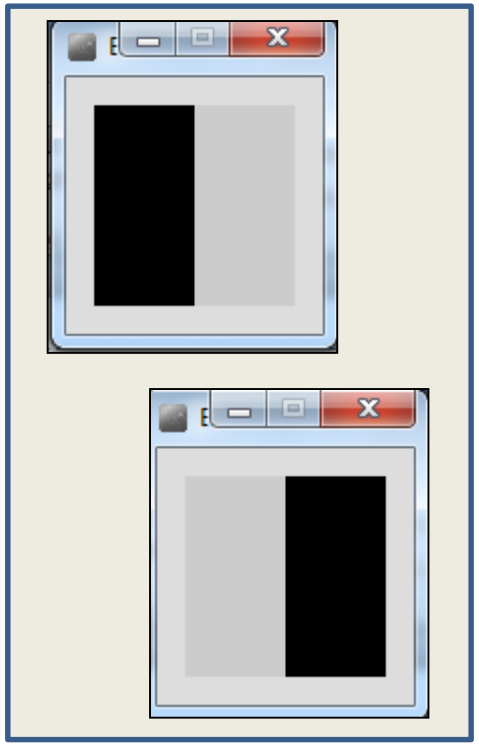


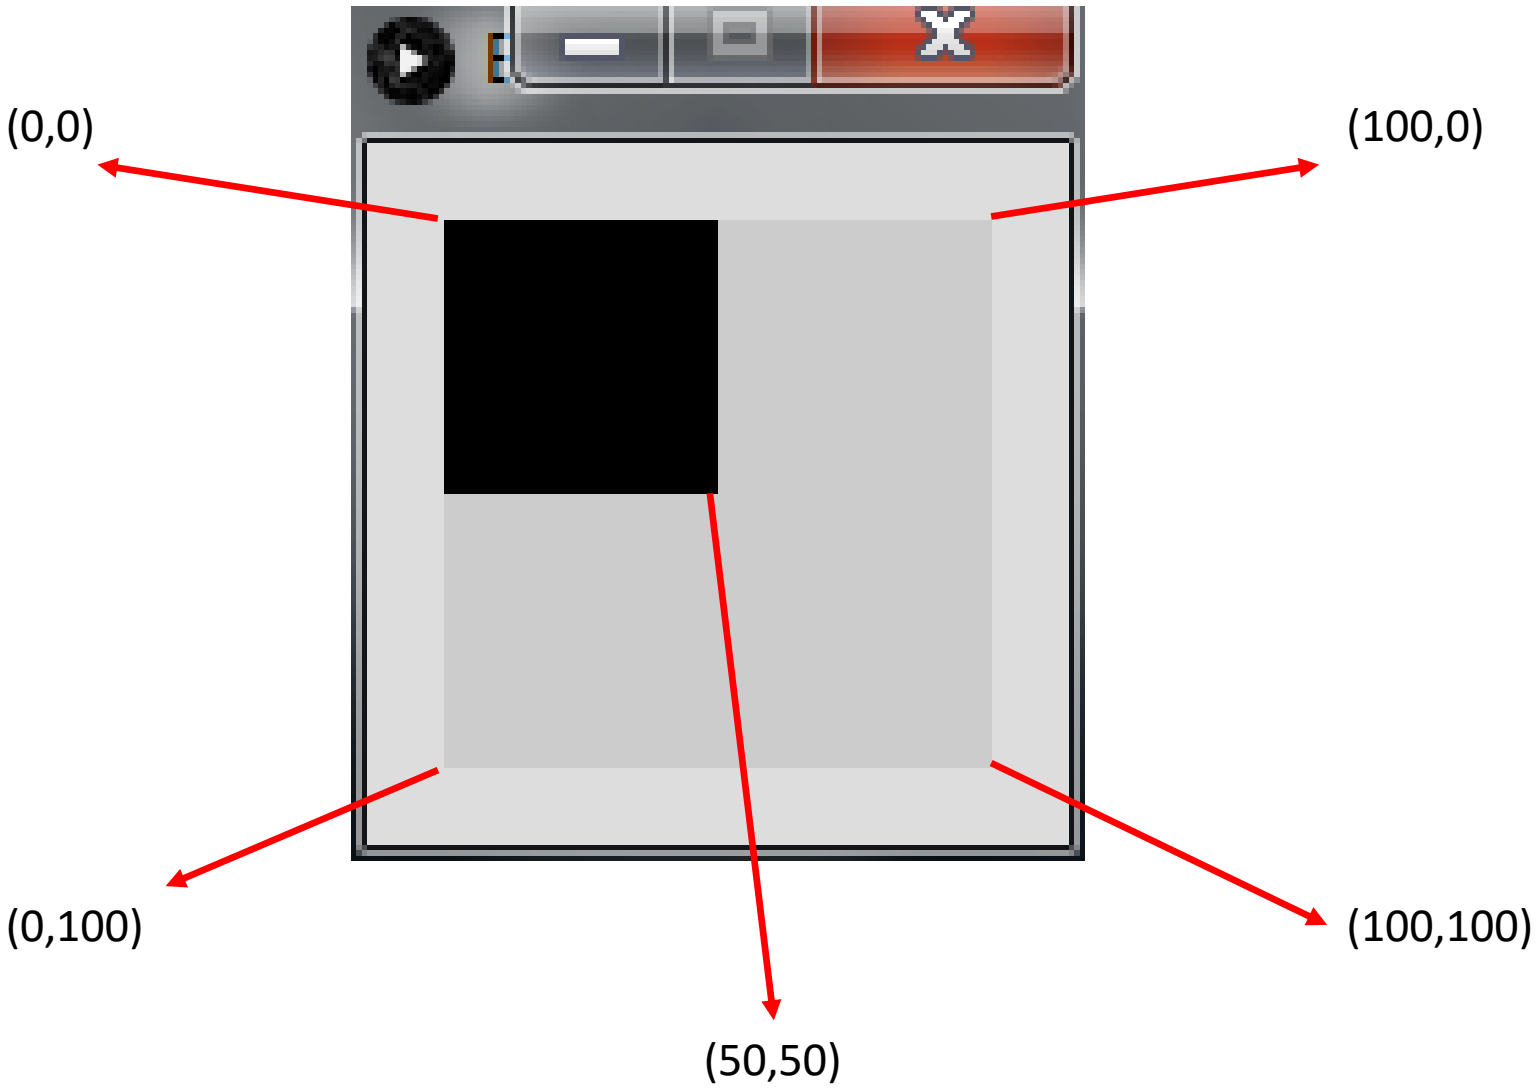
Conditional Example 3.1

Functionality:

If the **x-coordinate of the mouse** pointer is on the:

- **left** half of the display window, draw a rectangle on the left hand side.
- **right** half of the display window, draw a rectangle on the right hand side.





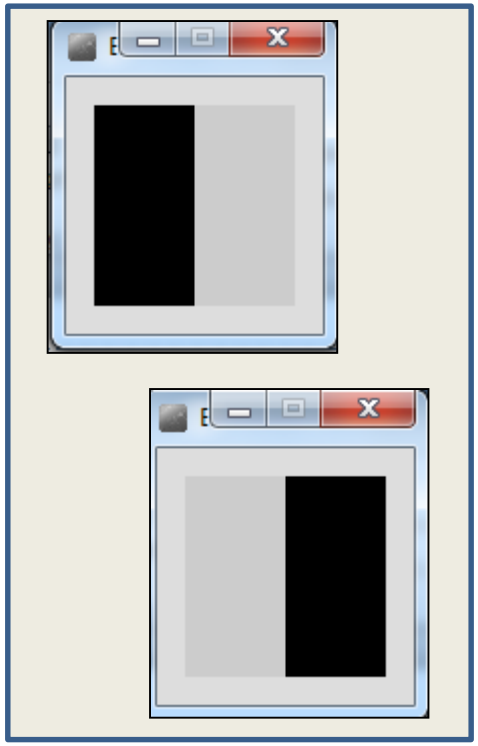
(0,0)
(100,0)
(0,100)
(100,100)
(50,50)

Conditional Example 3.1 - code

```
//Reas, C. & Fry, B. (2014) Processing - A Programming

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if (mouseX < 50) {
    rect(0, 0, 50, 100); // Left
  } else {
    rect(50, 0, 50, 100); // Right
  }
}
```

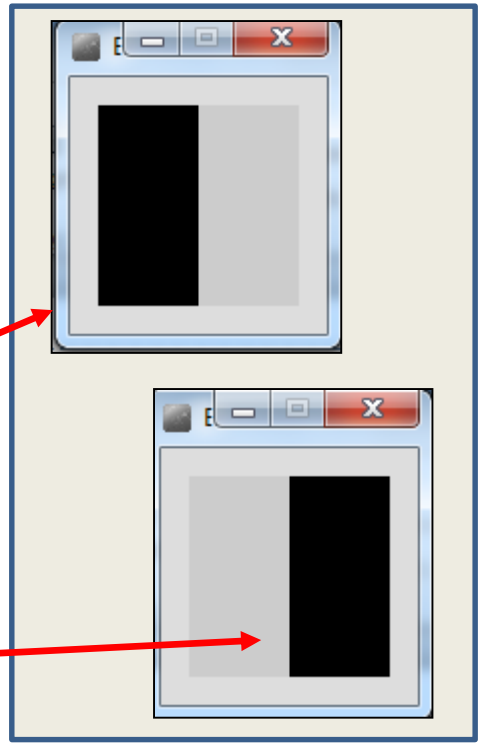


Conditional Example 3.1 - code

```
//Reas, C. & Fry, B. (2014) Processing - A Programming

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if (mouseX < 50) {
    rect(0, 0, 50, 100); // Left
  } else {
    rect(50, 0, 50, 100); // Right
  }
}
```

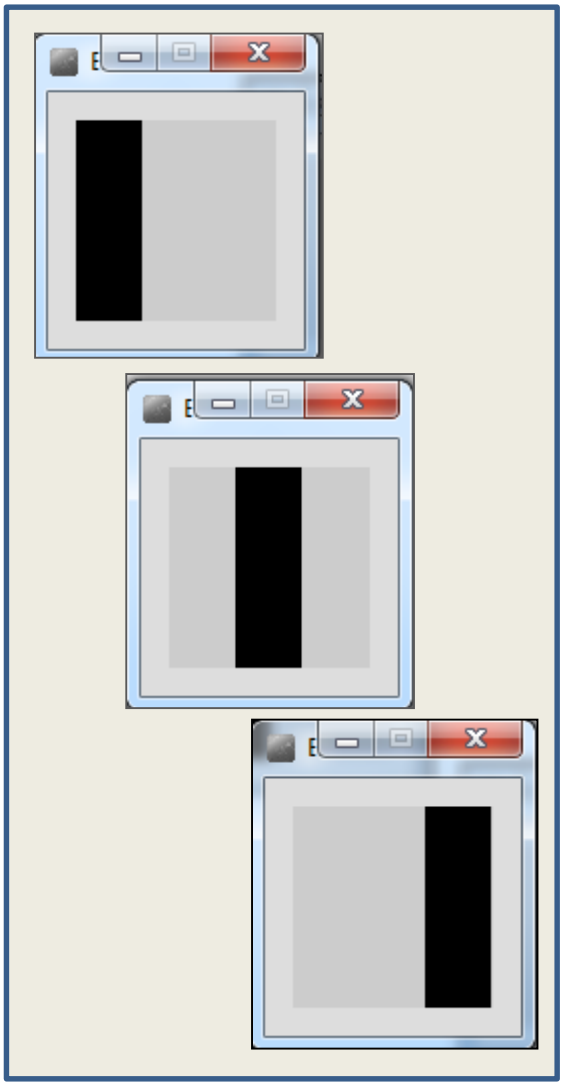


Conditional Example 3.2

Functionality:

If the **x-coordinate of the mouse pointer** is on the:

- **left third** of the display window, draw a rectangle on the left third of the window.
- **middle third** of the display window, draw a rectangle on the middle third of the window.
- **right third** of the display window, draw a rectangle on the right third of the window.

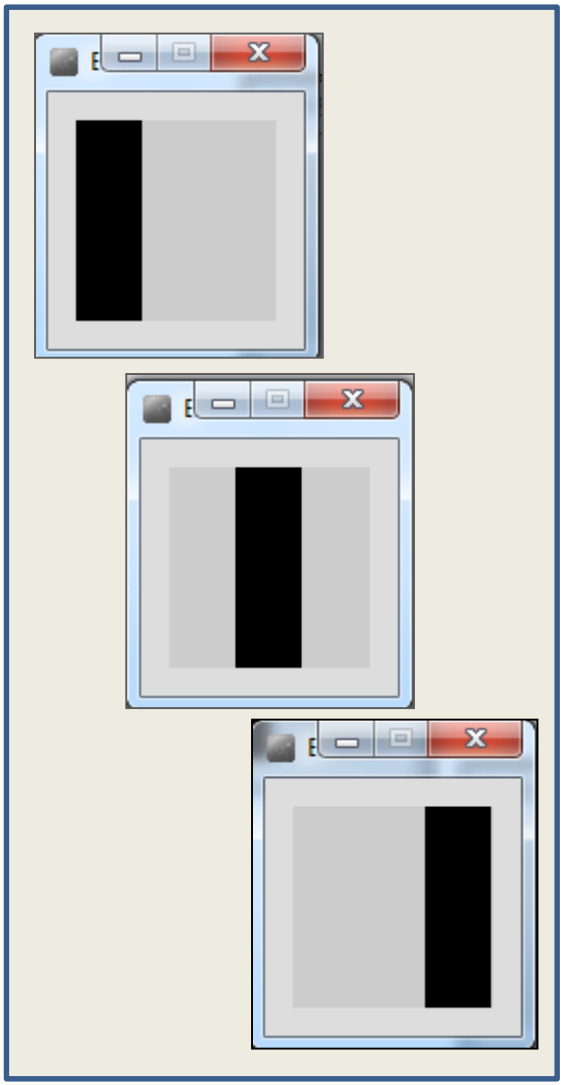


Conditional Example 3.2 - code

```
//Reas, C. & Fry, B. (2014) Processing - A Programming

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if (mouseX < 33) {
    rect(0, 0, 33, 100); // Left
  } else if (mouseX < 66) {
    rect(33, 0, 33, 100); // Middle
  } else {
    rect(66, 0, 33, 100); // Right
  }
}
```

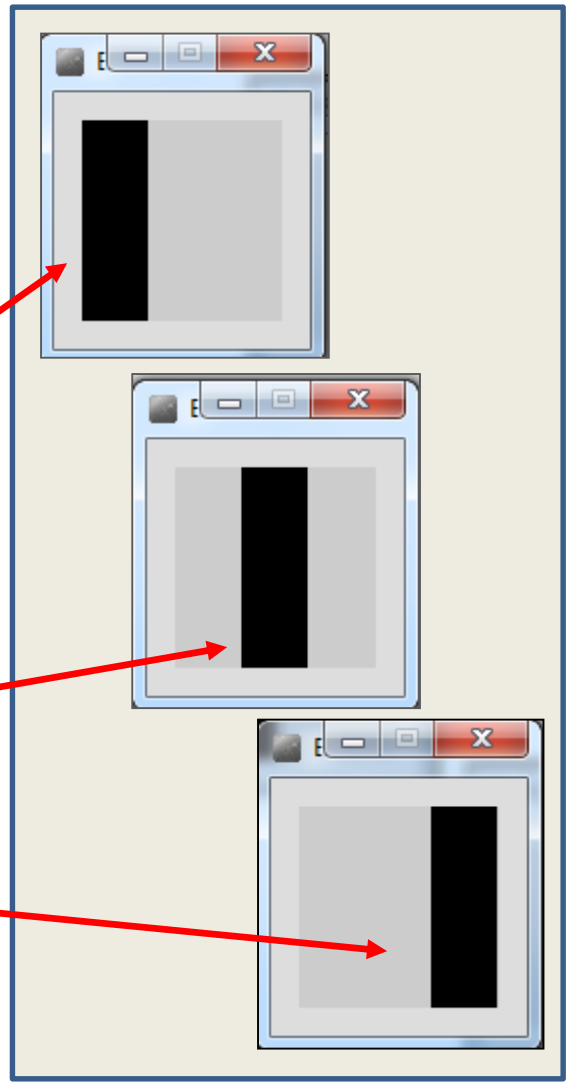


Conditional Example 3.2 - code

```
//Reas, C. & Fry, B. (2014) Processing - A Programming

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if (mouseX < 33) {
    rect(0, 0, 33, 100); // Left
  } else if (mouseX < 66) {
    rect(33, 0, 33, 100); // Middle
  } else {
    rect(66, 0, 33, 100); // Right
  }
}
```



Topics list

1. Conditional Statements
2. Boolean Conditions and Relational Operators
3. Logical Operators

Logical operators

- Logic operators operate on boolean values.
- They produce a new boolean value as a result.
- The ones that we will use, so far, are:

&&	(and)
||	(or)
!	(not)

Logical operators - AND

a && b

- This evaluates to true if both ***a*** and ***b*** are true.
- It is false in all other cases.

a	b	a && b
0	0	**0**
0	1	**0**
1	0	**0**
1	1	**1**

Logical operators - OR

a || b

– This evaluates to true if either ***a*** or ***b*** or both are true, and false if they are both false.

a	b	a II b
0	0	**0**
0	1	**1**
1	0	**1**
1	1	**1**

Logical operators - NOT

!a

- This evaluates to true if ***a*** is false, and false if ***a*** is true.

a	!a
0	**1**
1	**0**

Logical operators - summary

a && b *(and)*

- This evaluates to true if both ***a*** and ***b*** are true.
- It is false in all other cases.

a || b *(or)*

- This evaluates to true if either ***a*** or ***b*** or both are true, and false if they are both false.

!a *(not)*

- This evaluates to true if ***a*** is false, and false if ***a*** is true.

Logical operators - **quiz**

```
int a = 5;
int b = 10;
int c = 7;
```

What is the result of each of these boolean expressions:

Q1 `(a > b) && (a < c)`

Q2 `(a < b) || (c < a)`

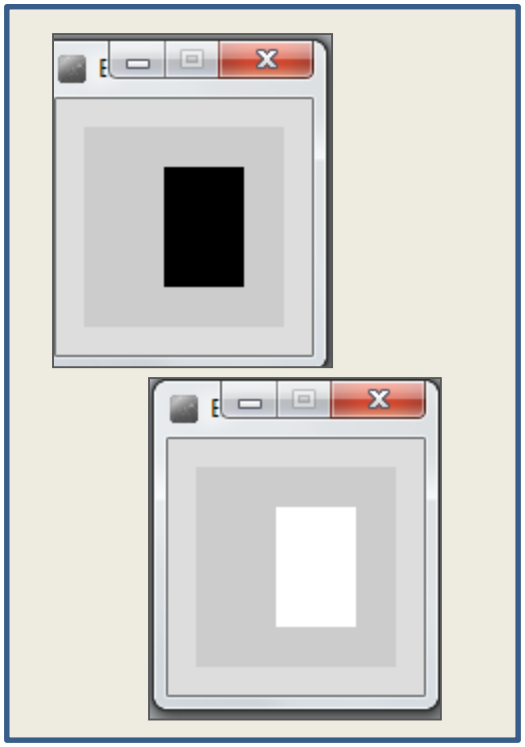
Q3 `!(b < a) && (c > b)`

Conditional Example 3.3

Functionality:

If the mouse pointer is:

- inside the rectangle coordinates, then fill the rectangle with white.
- otherwise, fill with black.

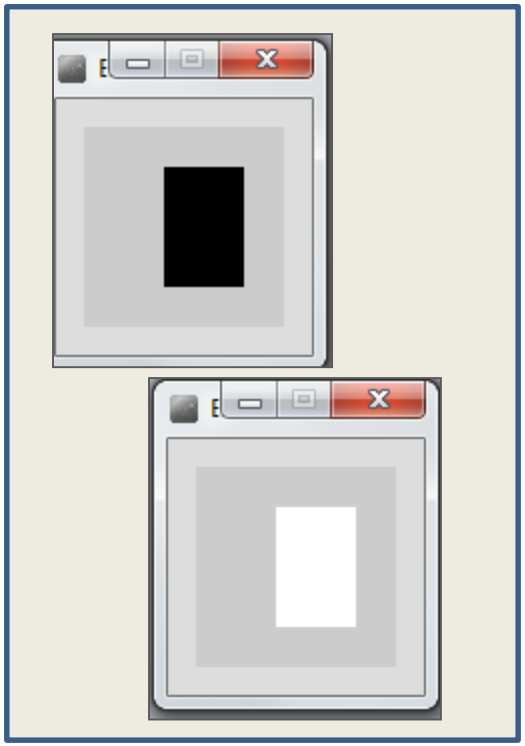


Conditional Example 3.3 - code

```
//Reas, C. & Fry, B. (2014) Processing - A Prog

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if ((mouseX > 40) && (mouseX < 80) &&
      (mouseY > 20) && (mouseY < 80)) {
      fill(255);  //White
  } else {
      fill(0);    //Black
  }
  rect(40, 20, 40, 60);
}
```

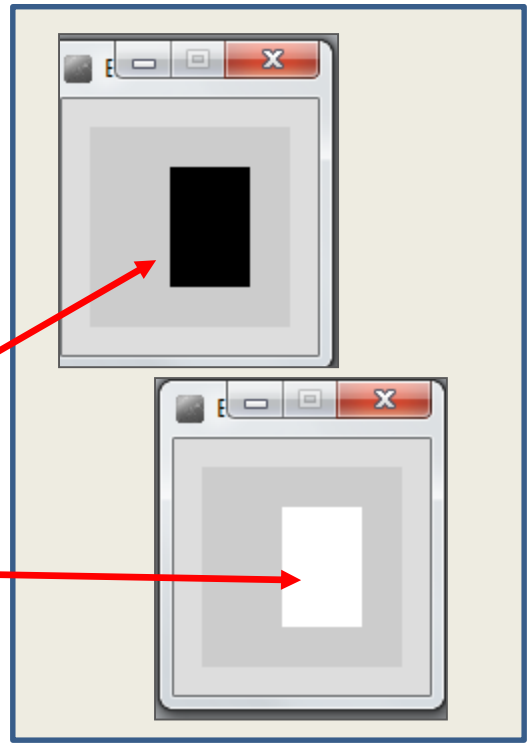


Conditional Example 3.3 - code

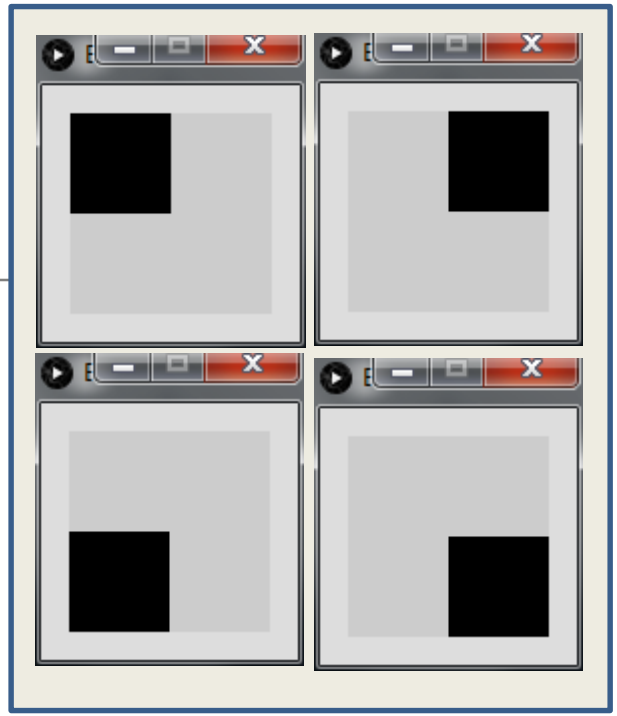
```
//Reas, C. & Fry, B. (2014) Processing - A Prog

void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if ((mouseX > 40) && (mouseX < 80) &&
      (mouseY > 20) && (mouseY < 80)) {
      fill(255);  //White
  } else {
      fill(0);    //Black
  }
  rect(40, 20, 40, 60);
}
```



Conditional Example 3.4



Functionality:

- If the mouse pointer is in the upper-left quadrant of the display window, draw a black rectangle covering the upper-left quadrant of the window.

- Repeat this approach for upper-right, lower-left and lower-right quadrants.

```
void setup() {
  size(100, 100);
  noStroke();
  fill(0);
}

void draw() {
  background(204);
  if ((mouseX <= 50) && (mouseY <= 50)) {
    rect(0, 0, 50, 50);      // Upper-left
  }
  else if ((mouseX <= 50) && (mouseY > 50)) {
    rect(0, 50, 50, 50);     // Lower-left
  }
  else if ((mouseX > 50) && (mouseY <= 50)) {
    rect(50, 0, 50, 50);     // Upper-right
  }
  else {
    rect(50, 50, 50, 50);    // Lower-right
  }
}
```
